

# Tree Facts and Trivia:

- \* The monkeypod tree is native to South America, is naturalized throughout the tropics, and can grow at up to 5 ft. every year.
- \* Also called the "Rain Tree" because the leafs are light sensitive and can close together on cloudy days allowing rain to fall through the canopy, and greatly benefiting understory plant growth.
- \* Monkeypod trees offer the beauty of their majestic canopy, shade production, and they fix nitrogen into the soil which is very good for surrounding plants & beneficial to most landscapes.

- \* Well maintained trees are safe and healthy trees. Regular maintenance of your trees can add thousands of dollars to your property value and they also are more visually pleasing.
- \* Due to their rapid growth, monkey pod trees should be maintained, in order to be safe and healthy every six month to 2 years, depending on their situation and circumstances.
